

SUSTAINABLE PROCUREMENT POLICY

PURPOSE:

Our company aims to enhance its environmental and social responsibility by adopting sustainability principles through our suppliers and business solution partners. This policy has been established to ensure sustainable supply chain management and environmental compliance.

SUPPLIER SELECTION::

Quality and Certifications: Our suppliers are expected to have internationally recognized quality assurance management systems as well as environmental and occupational health and safety management systems. Additionally, they must hold internationally accepted certifications related to sustainability.

Environmental Compliance: Suppliers' production processes must minimize harmful environmental impacts and fully comply with environmental regulations.

Resource Utilization: Suppliers should use natural resources responsibly, adhere to hunting bans, and consume resources without harming ecosystems.

Waste Management: Suppliers must strive to reduce waste and manage it appropriately. They should offer alternatives such as minimal packaging or bulk packaging for their products.

Product Specifications: Suppliers should prioritize eco-friendly, energy-efficient, locally respectful, recyclable, or recycled materials. They must provide product alternatives that are free from harmful chemical components and not tested on animals.

Local Production and Cultural Values: Suppliers should promote local production and services, offering products and services that reflect the cultural values of our country and region.

IMPLEMENTATION:

This policy is communicated to all suppliers, and they are encouraged to collaborate in creating sustainable procurement opportunities. By working together with our suppliers, we aim to minimize the environmental impacts arising from the procurement processes.

MONITORING AND REPORTING:

The implementation of the sustainable procurement policy is regularly monitored and reviewed. We request information and data related to sustainability from our suppliers on a regular basis. The monitoring and evaluation of supplier performance in terms of sustainability is an ongoing process.

This sustainable procurement policy is designed to reflect our company's commitment to environmental and social responsibility and to help our supply chain achieve its sustainability goals. We expect our suppliers to fully comply with this policy and actively contribute to sustainability principles.
